CURRENCY VALUE IS BROKEN

The multi-billion dollar barter industry tells the story about broken currency values. Typically transactions in barter take place when currency value for products and services are incorrect.

Currency Value is broken because there is no value standard and few tools for relative value information to compare different currencies.

INFORMATION CURRENCY

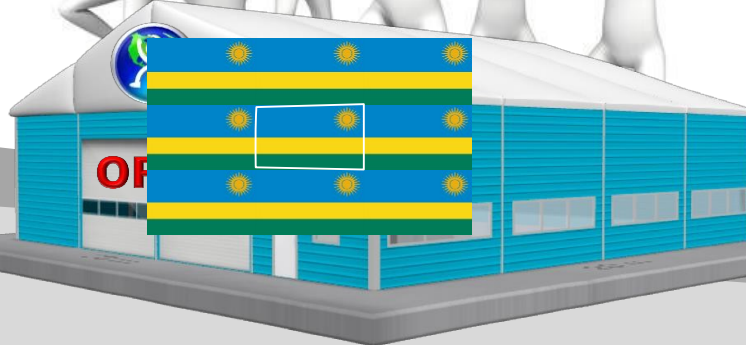

YOU WILL BE OUR CUSTOMER

Eventually.

Our goal: To provide information to markets about the relative value of any national currency, digital currency and eventually goods and services.

To provide a world market value of the Basic Human Need products that you use every day. BHN items are the most important; without them humans would perish.

WE OFFER OUR VALIDATORS TOKENS:

To inaugurate our Basic Human Needs back system, we will offer to “validators” worldwide the opportunity to report the commercial information of basic human needs products. By providing trade information of BHN products, at what price, how many, where they located validators earn digitized credits – tokens. These tokens can be redeemed for information analyzed by Item Banc’s first of its kind Global Parity Valuation Engine. The credits may also be traded, exchanged or sold.

All is automatically recorded by “smart contract” on our blockchain.

Click on the link and see how the Information Currency token functions:

HOW DOES THIS MAKE PROFIT

The Information Currency tokens increase in value as BHN assets are traded for the currency and it's information about what BHN products - are available where at what value. It is needed by banks, governments, and for most transactions.

The cryptocurrency increases in value as the information it represents becomes widely utilized.

WHAT HAVE WE TESTED.

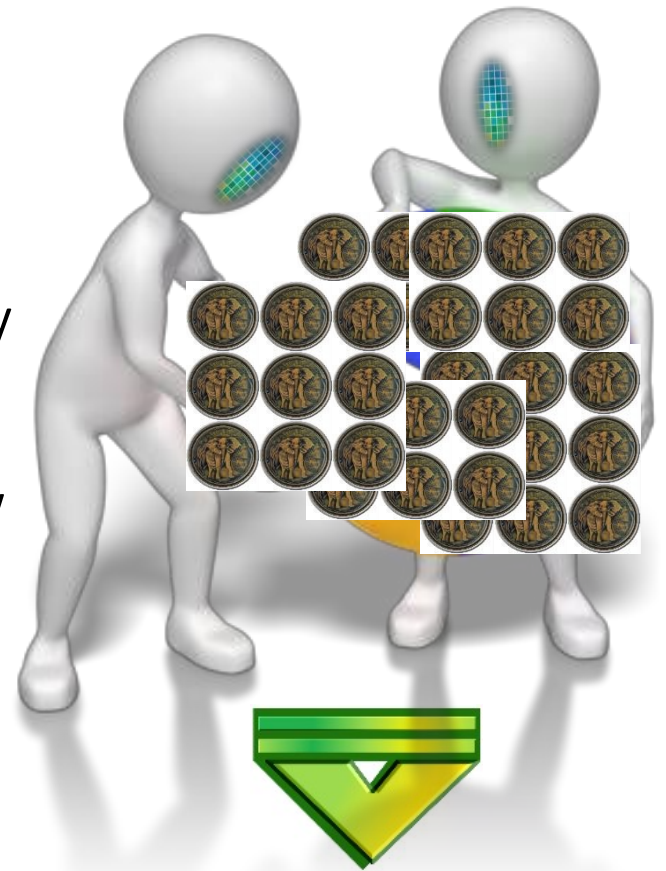

SHARING OUR PURPOSE

Our purpose is to deliver valuation information.
Our marketing is in that delivery. We believe if we deliver our plan then our story will be told over and over again.

Our story is our marketing because we will start by giving people around the world an opportunity to earn a new advanced Information Currency.

Our value is our marketing and our plan is to show the bankers and the government in that our technology and methods of doing business will be valuable to them. Those who hold Information Currency beforehand will profit from It increased utility.

INFORMATION CURRENCY

THE

Our team is made of entrepreneurs who have, each one, learned how to make and grow a plan. Introducing a few of us in front:

Anthony Short is an Australian from Perth who builds out organizations by advising in restructuring and raising of capital for public companies.

Henri Thompson is from Johannesburg, South African whose reputation was made by connectin nations in a common purpose.

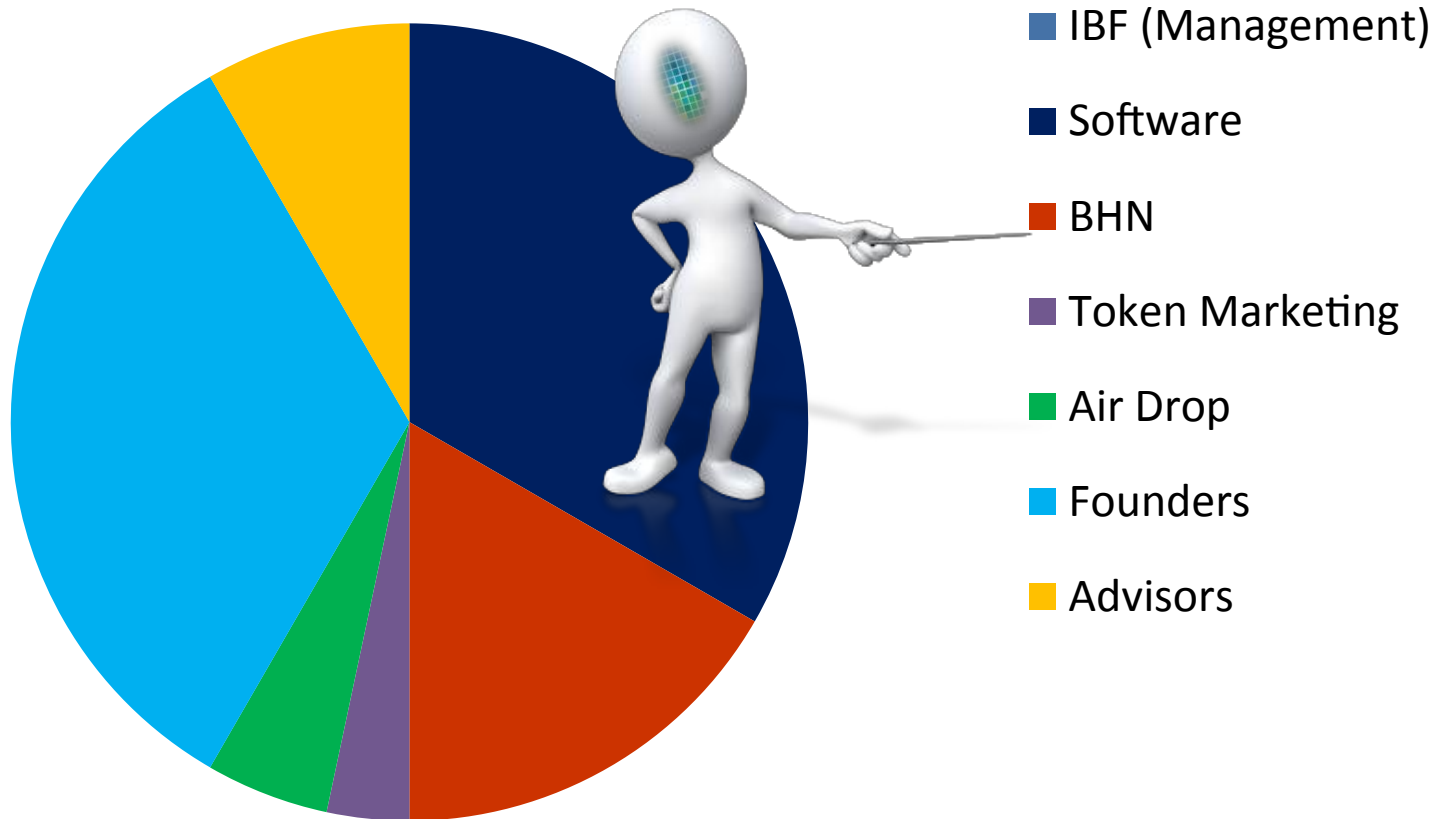

Jordan Gitterman is from United States,in Florida has connected people to projects in real est and cryptocurrency and he will move this project forward with talent from all over the world.

Virginia Robertson from the United States built an international corporate trade business in South Carolina and developed the framework for Item Banc technology.

Annette Riggs of Denver, United State built a retail and community barter company. She lent her expertise on the board of the largest trade organization in the world and to this plan from the start.

FINANCIAL PLAN

USE OF FUNDS

COMPETITORS FOR USE CASE

New currency asset types are racing to market. Some have very specific use cases such as Bitcoin for a universal store of value or tokens for specific industries like Med for medical records.

What all of these currencies need, including national (fiat) money, is an independent relative valuation technology.

Item Banc's technology a first of its kind Global Parity Valuation Engine stands on its own in this use case.

INFORMATION CURRENCY

WHY THE VALUATIONS ARE SOLID

"Back up a Truck"

Over the last twenty years as this methodology of barter business was tested, our sales strategy to make contracts for products on trade developed a mantra. *"Back up a truck"*

In real business this means, traders gravitate to security. They acquire items that they could always *"Back up a Truck"* to a warehouse and get value back because the value was secured in liquid, hard goods, BHN assets.

It may seem counter-culture in the cryptocurrency world, but our objective is to back this currency token with the trade information of the most liquid and basic needed commodity products. By making this information known BHN are commoditized. The ramifications are a plethora of new ways of financing and trade.

TECHNOLOGY

VALUATION

WHY THIS INVESTMENT IS SOLID

Our investors need to plan for an exit that begins on May 1, 2019. At this point our business model should be functioning and our related software in use.

One strategy is to convert your investment into the Rwandan utility tokens. These can be held or sold for cash.

A second strategy is to convert your investment into common stock in Item Banc, Inc. This would be a longer term strategy to anticipate our growth into other nations and the corresponding increase in value of the company as more nations adopt Item Banc technology.

ANTICIPATED PARTNERSHIPS

We are actively working on partnership with Cardano in Africa. Cardano is a third-generation blockchain protocol that to date has an 8 billion dollar market cap and is the eighth largest cryptocurrency in the world. Our objective is to partner with Cardano and benefit from their assistance in functioning our contracts on their blockchain platform.

We are also forging a relationship with Smart Africa, a coalition of African states with a mandate to prioritize technology on the continent.
